**Subject:** G-5320 Initial Site Work Specification Rev 1 for NPPD comments

Bob, Linda – I have completed my review of the subject specification. It was relatively easy to review since it consists of a set of “generic” specifications (for all manner of items including concrete, piping, grout, grounding, etc. )that will be applied during the erection of the following foundations:

- Two absorber towers, one for each unit
- Two absorber buildings, one for each unit
- Two chimneys, one for each unit
- Four FGD booster fans, two for each unit
- Duct support foundations
- All other miscellaneous structures and equipment as shown on design drawings

It then goes on to say that the drawings which, I assume, will contain the design details for all of the above, will be provided later.

Based on discussions earlier today with Bob, we need to assume that the most efficient way to accomplish this specification would be to include it in the package for the FGD island EPC contract. This overall comment needs to be provided to S&L to get their reaction/concurrence and determine whether they see a flaw in this approach. Once concurrence is reached, we then need to make sure the format and content of the specification is appropriate for this use. The technical content seems to be comprehensive from my review.
